NITRO.

NOD IT Request Operations

One unified place to submit, classify, and track every IT and project request across National Oak Distributors — built entirely on the Microsoft platform NOD already owns.

PLATFORM

Microsoft Power Platform

STATUS

MVP Complete —
Entering UAT

EXECUTIVE SPONSOR

Theron Neese

From fragmented intake to a single, unified pipeline

Today, requestors navigate multiple disconnected forms depending on the type of work, with no visibility into where a request stands.

NITRO consolidates all IT and project intake into **one guided experience** with real-time status and structured routing.

BEFORE

Disconnected & opaque

- ✗ No visibility into status, owner, or next step once submitted
- ✗ Reactive, manual communication between requestors and the PMO
- ✗ Throughput bottlenecks and inconsistent prioritization
- ✗ No organizational view of the IT demand pipeline

WITH NITRO

Unified & transparent

- ✓ Real-time status visibility for every requestor, at any time
- ✓ Structured PMO queue with classification-assisted routing
- ✓ Dedicated IT estimation workflow feeding clean decisions
- ✓ Consistent, auditable record of all requests and approvals

Reduced intake confusion

One place to go, regardless of request type — no more hunting for the right form.

Increased submitter visibility

Every requestor sees current status at any time without contacting the PMO.

Increased throughput

The PMO triages, classifies, and routes faster with a structured queue and automation.

Every request is routed to the right level of governance

At intake, a brief **five-question gate** — about 60 seconds — assesses scope, complexity, and revenue impact, then assigns one of three governance paths automatically.

THE GATE 5 QUESTIONS · ~60 SECONDS

Q1

Work needed from anyone outside your team?

Q2

Need a shared resource from another department?

Q3

How well is the solution understood today?

Q4

What is the estimated duration?

Q5

Intended to generate or protect revenue?

MINIMAL GOVERNANCE

Just Do It

Low-complexity, short-duration work with a well-understood solution. Fast-tracked straight to approval with no IT estimate required.

PATH

Direct to estimate

PMO REVIEW

PMO Triage

Moderate complexity or cross-team involvement. Requires PMO review, resource coordination, and often an IT effort estimate.

PATH

Triage → estimate → approve

EXECUTIVE GOVERNANCE

Steering Committee

High complexity, long duration, or cross-departmental resources. Strategic initiatives requiring executive-level governance.

PATH

Full governance review

Speed with accountability. The classification is derived automatically from the request details and shown to the requestor before they proceed. The PMO can adjust it during triage — and every change is recorded in the audit log with a documented reason.

The lifecycle of a request, start to decision

Every request follows the same entry point and classification model, then moves through a clear sequence of actors. IT estimation is engaged only when effort assessment is needed.

THE STATUS MODEL – VISIBLE TO THE REQUESTOR AT EVERY MOMENT

Fully automated, invisibly. Notifications at each stage are delivered through Microsoft Teams and Outlook by background flows. Every significant action is written to an append-only audit trail in Dataverse.

Built entirely on Microsoft technology NOD already owns

NITRO introduces **no new vendors and no new platforms**. It operates within NOD's existing Microsoft 365 tenant, inheriting the same identity, security, and compliance standards as every other Microsoft 365 app.

Zero new vendors. Zero new logins.

No new email domain, no new messaging platform, no new system to learn — and no data ever leaves the NOD tenant in v1.

Power Apps

The application itself — a browser-based Canvas App accessed with existing NOD credentials.

Dataverse

Enterprise database with row-level security, field-level control, and a full audit trail.

Power Automate

The automation layer handling notifications, approvals, and status writebacks.

WHAT NITRO IS

- + Unified intake & triage
- + Real-time status tracking
- + Auditable system of record

WHAT IT IS NOT (V1)

- A project management tool
- A replacement for Jira
- A downstream tracker

Five roles, one source of truth

Access is governed by a single user registry in Dataverse and enforced at login. Standard users self-enroll as Contributors automatically; elevated roles are granted intentionally by an administrator.

 Administrator Full access to all screens and records; manages questions and assigns roles.	 PMO Manager Operates the triage queue — classifies, routes, and monitors the full pipeline.	 Approver Reviews routed requests and approves or rejects them from the review screen.	 IT Estimate Mgr Reviews assigned requests and submits effort estimates back to the PMO.	 Contributor The default role — submits requests and tracks their own submissions.

ENFORCED AT THE APPLICATION LAYER • SCREENS A USER CANNOT ACCESS ARE HIDDEN FROM VIEW

MVP complete — entering User Acceptance Testing

Feature-Complete

The NITRO MVP covers the full request lifecycle including EDI and eCommerce category workflows. UAT is underway, with production go-live targeted for Q3 2026.

Roadmap — future iterations, in priority order

1

Jira automatic ticket creation

Auto-create a Jira ticket on approval and write the ID back to NITRO.

2

Dedicated approval flows

Power Automate flows with retry logic, failure logging & adaptive cards.

3

Full submitter notifications

Automated email across every status transition the requestor can see.

4

Prism integration

Automated post-approval entry, contingent on API availability.

5

Project Hub screen

Post-approval tracking — business case, schedule & milestones.

6

Mobile-optimized layout

Responsive breakpoints for key screens based on user feedback.

7

Additional user roles

Read-only Viewer and Business Sponsor visibility roles.

8

Reporting & analytics

Pipeline by category, throughput trends & SLA compliance.

NITRO.

One front door for IT demand — giving requestors *visibility*, the PMO *control*, and leadership a *consistent, auditable record* of every decision.

01

Reduced confusion

One place to submit, regardless of request type or category.

02

Real visibility

Every requestor sees status at any time — no PMO outreach required.

03

Faster throughput

Structured triage and automation move work through the pipeline.
